

Willie Ellis

Senior Software Engineer

Buffalo, New York | (760) 995 2578 | willie.ellis.0177@gmail.com | <https://www.linkedin.com/in/willie-ellis-a6b492212/>

Highly-skilled and motivated software engineer with 7+ years of work experience. 5 years of experience in Go and 8 years in JavaScript, React, HTML, CSS and Python web services. Good implementation knowledge of the OOPs concept and SOLID principles. First-hand experience with microservices architecture and design patterns. Excellent problem-solving skills, interpersonal skills, commitment, and hard work.

Professional Experience

A4SAFE | Stafford, Virginia Senior Software Developer | August 2019 - February 2023

- As a key contributor, spearheaded the successful automation and modernization of the payroll validation and appraisal process within an HR enterprise application for a workforce of 15,000 outsourced employees.
- As the lead developer, I designed and built a user-friendly HR enterprise application that could efficiently handle large volumes of data. I implemented a webhook that automatically captured new employee data from the bank's AD, eliminating the need for manual data entry. I also restructured the database tables, ensuring data integrity and avoiding data loss during migration.
- Developed front-end for 7 projects using React.js, UI / UX successfully determining and defining project scope and objectives
- Implemented various performance optimization techniques such as caching, load balancing, and database indexing to backend services to ensure scalability and efficiency.
- Collaborated with several cross functional teams both internal and external to foster clear communication and set apt goals and expectations.
- For fraud checks, I integrated various fraud detection tools and techniques into the virtual card system. This included IP address and geo-location tracking, email verification, and device fingerprinting. By leveraging these technologies, we were able to detect and prevent fraudulent activities and unauthorized access to the system.
- Redesign and Rebuild existing microservices from python to Golang putting an end to performance issues experienced in serialization and deserialization of data from the DB while converting to objects.
- Involve setting up a PostgreSQL database cluster on Amazon RDS, which is a managed database service provided by AWS

Tech stack: AWS, Postgre SQL, S3, SES, SNS, EKS, ECS, KMS, Docker, Go, Echo HTTP Server, Postgresql, Redis, CI / CD, Kubernetes, FastAPI, React, Javascript, OpenStack, Network Stack.

Trail Blazer | Brooklyn, New York Senior Full Stack Developer | November 2017 - July 2019

- Developed a custom data analytics dashboard with real-time data for Custom built Camp management software, providing valuable insights into business performance for informed decision-making.
- Selected and integrated appropriate technologies, designed and implemented features such as data visualization and interactive filters to enhance usability and functionality.
- Implemented security measures including password policies, multi-factor authentication, token-based authentication, and Content Security Policy (CSP) to protect against DoS, DDoS, XSS attacks, and unauthorized access to user accounts
- Coded responsive websites to operate in mobile, tablet, and desktop formats using Typescript, React.js, GraphQL
- Developing and maintaining integrations between Trail Blazers' various software systems, such as the website, registration system, and accounting software.
- Building and maintaining an e-commerce platform for Trail Blazers' online store, which would include features such as product listings, shopping cart, checkout, and payment processing
- Creating and maintaining a content management system for Trail Blazers' website, which would involve designing templates, managing content, and ensuring site performance and security.

- Collaborate with the design team.
- Transfer the business knowledge to the team.
- Use AWS Identity and Access Management (IAM) to manage access to the database cluster.

Tech stack: GCP, GCS, k8s, Go, gRPC, React, Javascript, Docker, Postgresql, CI / CD, Kubernetes, FastAPI, OpenStack, Apache, Network Stack.

Wells Fargo | New York, New York
Python Software Engineer | June 2015 - June 2017

- I was a key contributor to building a virtual card project for a bank where I developed and implemented various features such as velocity checks, fraud checks, and balance checks.
- Work on a payment gateway that helps developers and businesses to connect directly to the bank's core services in order to make payments to the bank's customers.
- Developed user interfaces and components using HTML/HTML5, CSS/SCSS, JavaScript and jQuery, AJAX, JSON, UI / UX and React.js, GraphQL, boosting in-depth understanding of design, development, and deployment
- Successfully completed a stalled payment authorization microservice project within the first month of employment, which involved migrating an existing MPQR 1.0 payment authorization microservice to MPQR 2.0 for when the bank acted as either the Originating Institution (OI) or Receiving Institution.
- Implemented a new Authorization API service to enable the bank to receive authorization requests via an API, replacing the previously used Message Interface Processor (MIP).
- Work with senior developers to manage large and complex design projects for corporate clients.

Tech stack: Python, Django, Flask, FastAPI, React, Javascript, OpenStack, Oracle, MongoDB, CI / CD, Kubernetes.

Intel | Folsom, California
Full Stack Developer | April 2012 - June 2015

- Successfully designed and implemented API integrations to streamline data storage in a PostgreSQL database.
- Enhancing system efficiency and performance.
Proposed and implemented process improvements to optimize development and maintenance, resulting in increased team productivity and efficiency.
- Implemented inclusive and accessible user interface screens using AngularJS, HTML, CSS, JQuery, Javascript and Scrum to support teamwork on 10 software products, resulting in 10% decrease in deployment time
- Deployed all applications to Ubuntu Servers running on Digital Ocean's Cloud computing platform for flexibility and reliable uptime.
- Work on a digital repository that can store digital contents, including documents, images, video, and audio.
- Work on database maintenance and increase query performance by 90%.
- Enhance and improve the existing system.
- Experience in writing and implementing unit tests.
- Involve in systems design, development, testing, implementation, documentation, and support.

Tech stack: AWS, ECS, Docker, CI / CD, Kubernetes, HTML, CSS, Javascript, Python, Django, Flask, FastAPI, OpenStack, MYSQL

Core Competencies

User Interface/Component Development, Database Schema, Debugging/Analyzing Issues, Software Engineering Best Practices, Backend Services, Teamwork, Communication

Technical Skills

Front-end Developer, Node.js, JavaScript, React, RESTful API Design, Microsoft SQL Server, CI/CD, AWS, TypeScript, Nestjs, HTML, CSS, React, Express, Python, Django, MongoDB, Docker, GCP, Git, Go/Golang, gRPC, Kafka, go-gin, revel, echo

Education

Bachelor's Degree in Computer Science, University of Southern California, California

Front End Web Development Certificate, LinkedIn Course, In Progress

AWS Certified DevOps Engineer, Udemy

Full-Stack Web Development with React Certification, FreeCodeCamp
